

PRODUCT PROFILE

DESCRIPTION

COMBAT Greez-It is a multi-task High Temperature Lubricant with outstanding performance in countless thermal applications. COMBAT Greez-It can be applied to equipment the same as traditional lubricants. At high temperature, the petroleum carrier evacuates leaving a specially formulated coating that bonds to the base metal. Forming a smooth low friction contact point by filling the imperfections and irregularities on metal surfaces that cause excessive wear on critical components—up to 2100° F.

TEMPERATURE USE LIMIT

2200° F (1200° C)

BEFORE

AFTER

TYPICAL PROPERTIES & PERFORMANCE

Works in temperatures as low as -10° F. Unlike graphite lubricants, COMBAT Greez-It does not depend on molecular water to function. Therefore, when other freeze up in the cold, COMBAT Greez-It keeps on turning. The resulting thick 30 micron film coating on both shaft and journal adds up to minimal wear on critical process equipment.

PACKAGING

COMBAT Greez-It is available in 1 and 5 pound containers.

BENIFITS

- Will not lose lubricity in low dew point atmospheres (-10° F).
- COMBAT Greez-It forms a thicker bonded layer to both metal contact surfaces (30 micron) which equates to fewer applications are necessary.
- Sizing of contact points is not as critical since COMBAT Greez-It fills the gaps.
- Reduces lubricant consumption and maintenance hours.

100 RACES

COMBAT Greez-It has the competitive advantage!
